

QuickScan[®] Analysis

Comprehensive Evaluation for Improved Compliance and Efficiency

OPERATE WITH GREATER PRECISION[™]

Know Your Next Move

AESCULAP[®]

Insights that enhance efficiency

Maintain regulatory compliance and drive innovation with a hands-on assessment of processes and inventory.

Turnover is a reality in many sterile processing departments (SPD), creating unique challenges for leadership. Even experienced teams can feel the strain of navigating complex workflows, adapting to ever-changing regulatory requirements and staying prepared for audits while managing the demands of day-to-day operations.

It's easy for SPD leaders and their staff to get overwhelmed and much harder to know if their current processes are compliant, let alone efficient. If a lack of bandwidth or experience is keeping your team from improving workflows and adjusting to new regulations, Aesculap can help.

Are you staying on top of changing regulations and process efficiency?

Our team will help **identify opportunities for improvement** before your next audit.

QuickScan® Analysis helps you navigate compliance with confidence and spark new ways to innovate through a practical, hands-on look at your current processes and inventory. No matter your auditing challenges, you can trust that our team has not only encountered them but also knows how to effectively handle them.

Our analysis, your insights.

Our in-depth approach assists with reducing the hard work of process and compliance auditing so you and your team can focus on maintaining and enhancing operations during engagement.

Initial assessment

We start with an audit of SPD operations and reprocessing throughout an instrument's life cycle for comprehensive baseline evaluation.

Best practice identification

Our experts take the insights gained from your assessment and turn them into clear, usable recommendations for improving surgical asset management.

Instrument inspection

A detailed assessment of your most used surgical sets reveals insights into their current condition and remaining lifespan.

Improve SPD efficiency and increase surgical readiness

Equip your team to make more confident business decisions and implement growth initiatives with insights that:

- **Improve surgical asset management** effectiveness by identifying best practices.
- **Enable faster, more reliable surgical growth** while processes and equipment remain compliant.
- **Deliver recommendations** management and staff can follow, regardless of experience.

GUIDELINE ADHERENCE

Help ensure your processes are compliant while finding ways to optimize them to minimize the risk of a poor audit outcome.

INSTRUMENT EVALUATION

A full-scale analysis of your surgical inventory provides a clear picture of instrument quality issues, lifespans and if replacement is necessary.

ON-SITE WATER TESTING

Our team will perform an extensive on-site water analysis to identify issues that could affect instrument quality and help you make repairs.

POINT-OF-USE DATA CAPTURE

Proprietary technology allows for more accurate data capture on resource usage.

Reporting

The most important findings into instrument condition, washer efficacy, water quality and more are compiled into an easy-to-understand report.

Quality assurance

By the end of our engagement, you'll feel confident that in-use instruments meet quality standards and your SPD is audit-ready.

On-site water testing

State-of-the-art tools enable fast, accurate measurement and evaluation of water and steam quality.

Partnership that powers operational excellence.

Through collaborative
excellence, we will improve the
quality of a patient's life and
meet the needs of the changing
healthcare environment.
